Hello families!

This week we learned about Physical and Chemical change and the 3 states of matter (liquid, solid & gas).

We played a fun game for physical and chemical change, where we were in groups of 2 and whichever team placed all 20 cards in the correct group won. We then went over each card as a class and discussed why each card is one or the other.

For the states of matter, we discussed this as a class, and we helped each other to determine which cards go in which group.

We started another new game called math cubes. Two friends each roll some dice with different numbers and either addition or subtraction. The first one to call out the correct answer can then challenge another friend. They really enjoy this game!

We also did a fun craft involving shaving cream and food coloring!

We hope everyone has a great weekend!

Thank you,

Ms. Miranda
