Hello families!

Today we learned about fingerprints! We learned that every single fingerprint is different, and our fingerprints can be used to identify us!

We did a fun “Who Done It?” activity where we had to find and match fingerprints that were left around the classroom to see who stole our donuts! We used 3 types of fingerprints whorl, arch, and loops to examine and notice the difference.

After we found our prime suspect, we then did a fun painting activity. Using our own fingerprints we decorated a fall leaf!

We also played with the cubelets. The cubelets teach us how one block of energy can help give the other cubes energy. With one power cube, it helped transfer power to other cubes that had wheels, lights or twisters to power up and move! We were able to make boats, cars, spinning towers and more with our cubes! Without the power cube we could see that our other cubes wouldn't work. This taught us how energy can transfer and without it, show us how things won't work without the power source!

I hope everyone has a great week/end! 😊

Thank you,

Ms. Miranda
